Algebraic geometry

Mathematical Archipelago · Region detail / 9,693 entries

Highly connected entries

descend finite presentation [01ZM]

affine compare bounded [06Z0]

flat base change cohomology [02KH]

points cartesian [03H4]

fppf open [01UA]

quasi coherent affine cohomology zero [01XB]

final bootstrap [04S6]

push forward quasi coherent [01LC]

formal algebraic space [0AIM]

image proper scheme closed [01W6]

quasi compact affine cover [03H6]

descend finite presentation [07SK]

finite type noetherian [01T6]

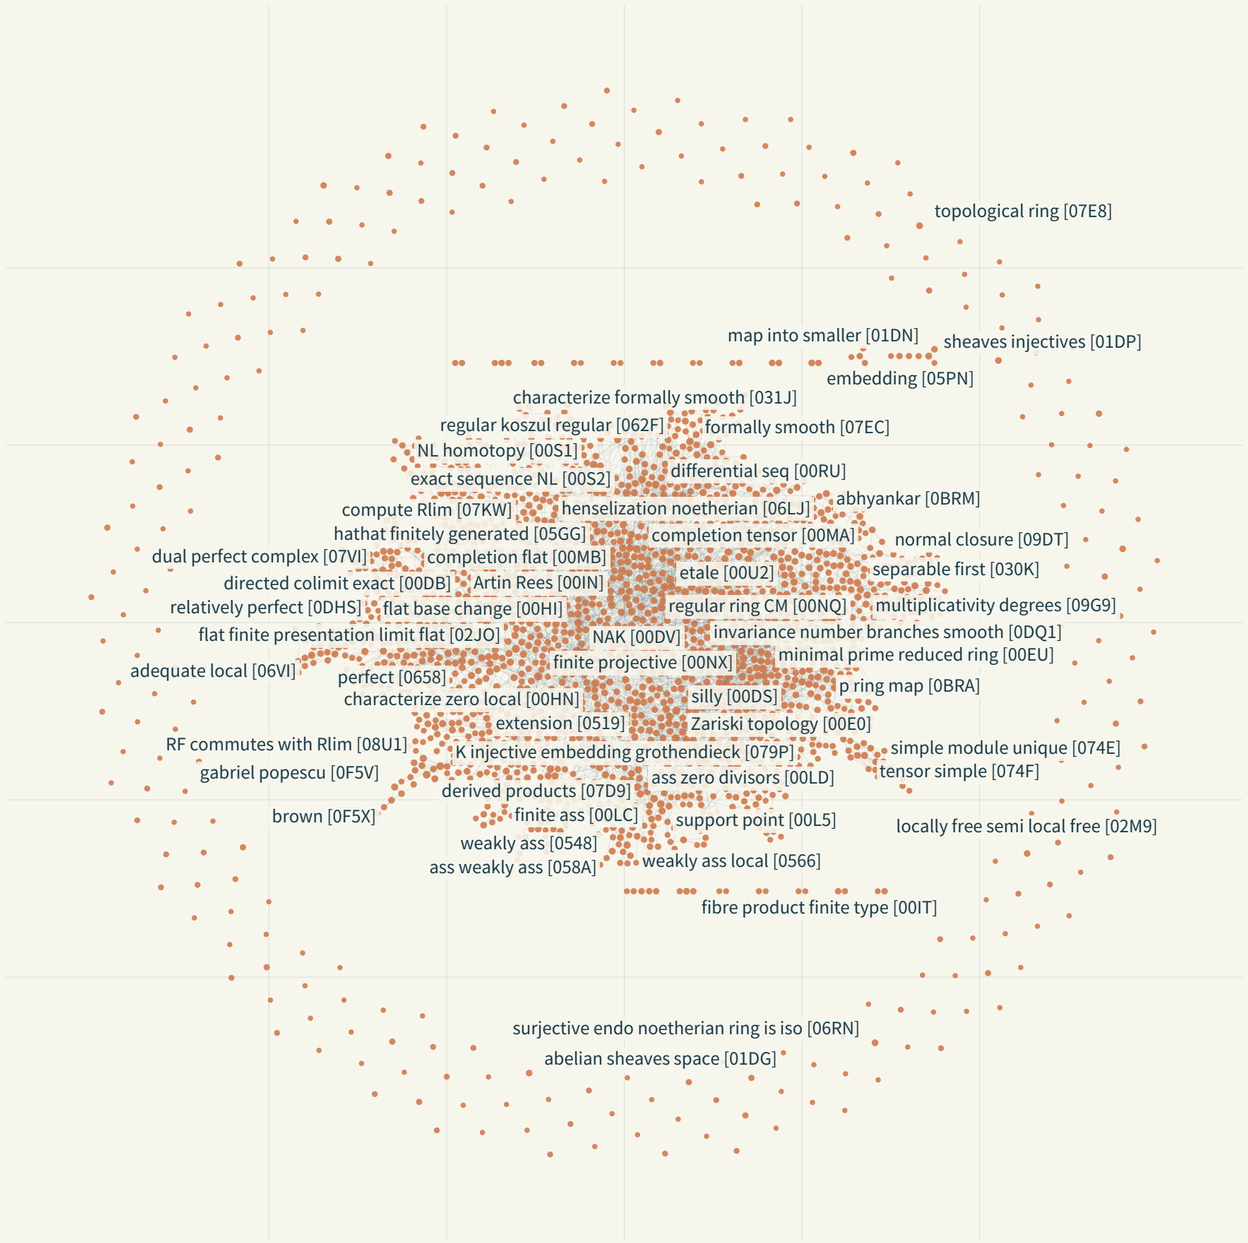

presentation [02WW]

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Commutative algebra

Mathematical Archipelago · Region detail / 2,530 entries

Highly connected entries

NAK [00DV]

finite projective [00NX]

silly [00DS]

Zariski topology [00E0]

completion flat [00MB]

minimal prime reduced ring [00EU]

regular ring CM [00NQ]

characterize zero local [00HN]

one equation [00KW]

characterize dvr [00PD]

characterize smooth over field [00TT]

K injective embedding grothendieck [079P]

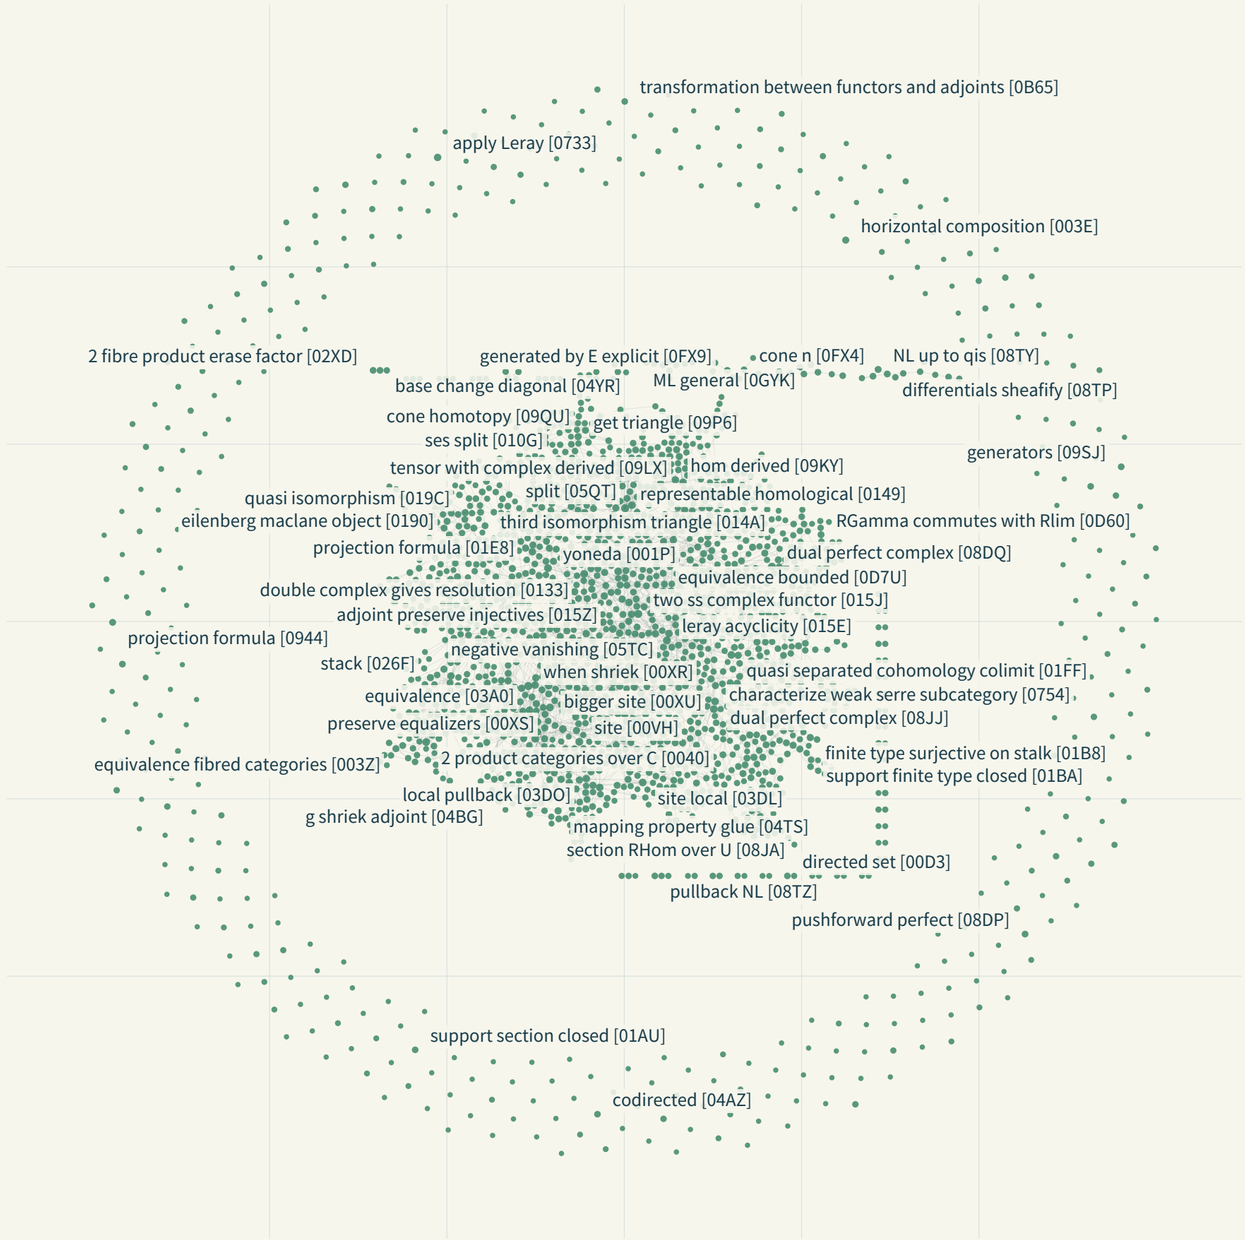

flat base change [00HI]

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Categories & homology

Mathematical Archipelago · Region detail / 2,292 entries

Highly connected entries

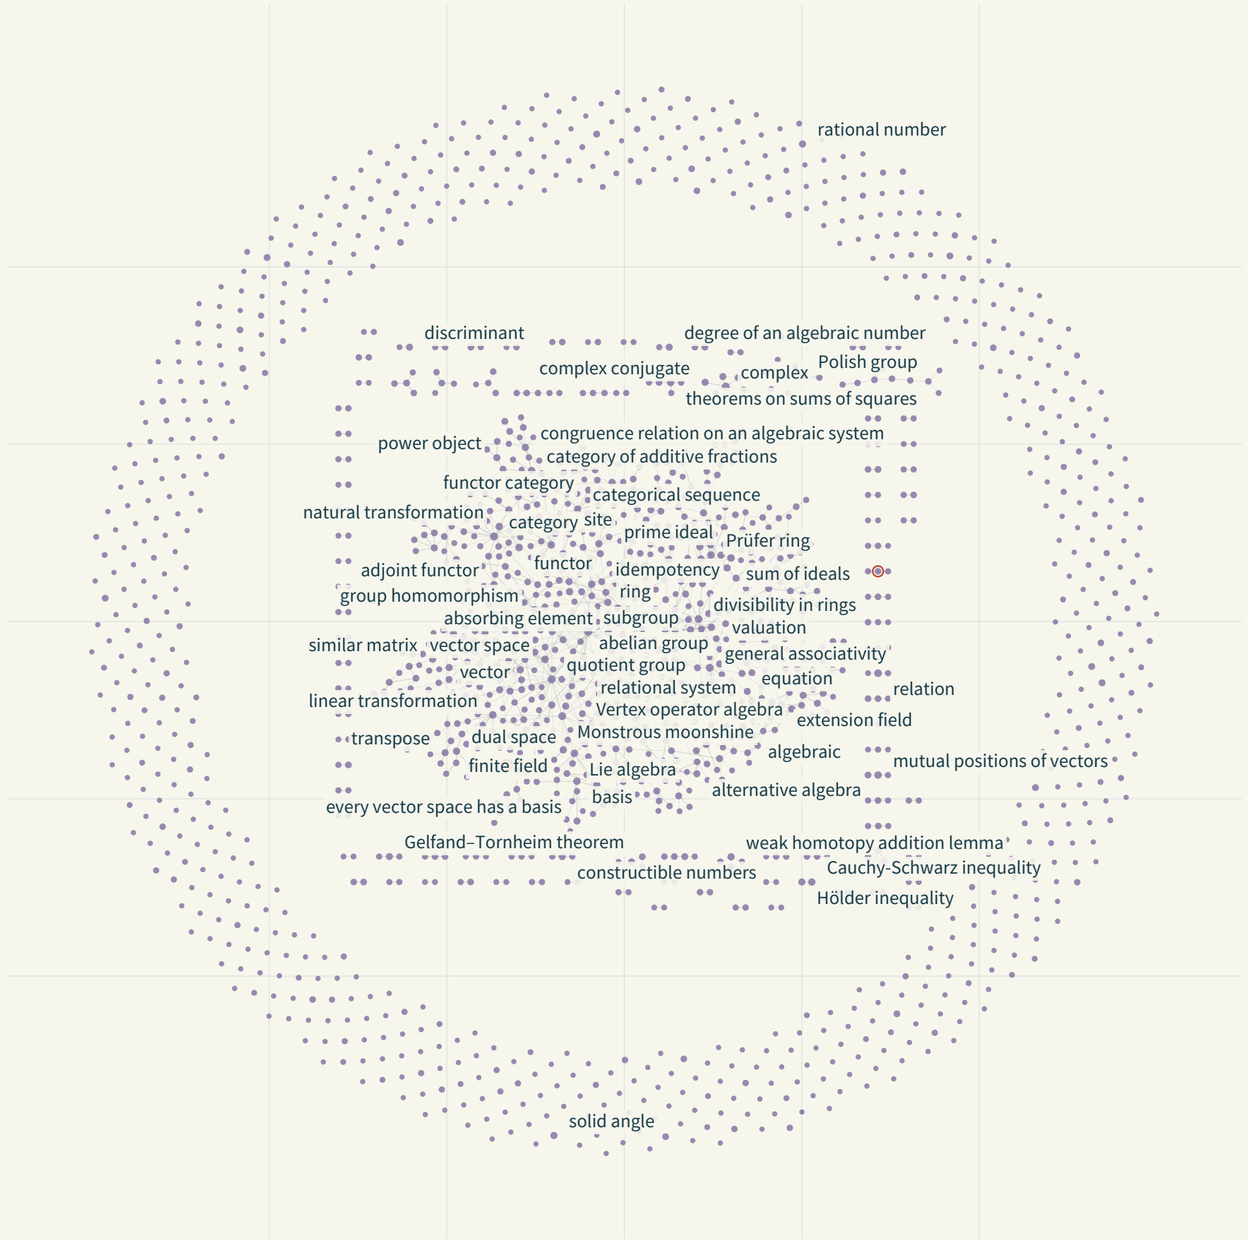

- when shriek [00XR]
- representable homological [0149]
- two ss complex functor [015J]
- dual perfect complex [08DQ]
- yoneda [001P]
- site [00VH]
- leray acyclicity [015E]
- adjoint preserve injectives [015Z]
- 2 product categories over C [0040]
- preserve equalizers [00XS]
- bigger site [00XU]
- double complex gives resolution [0133]
- adjoint exact [0038]
- essential image j shriek [00Y1]

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Algebra & structures

Mathematical Archipelago · Region detail / 1,759 entries

Highly connected entries

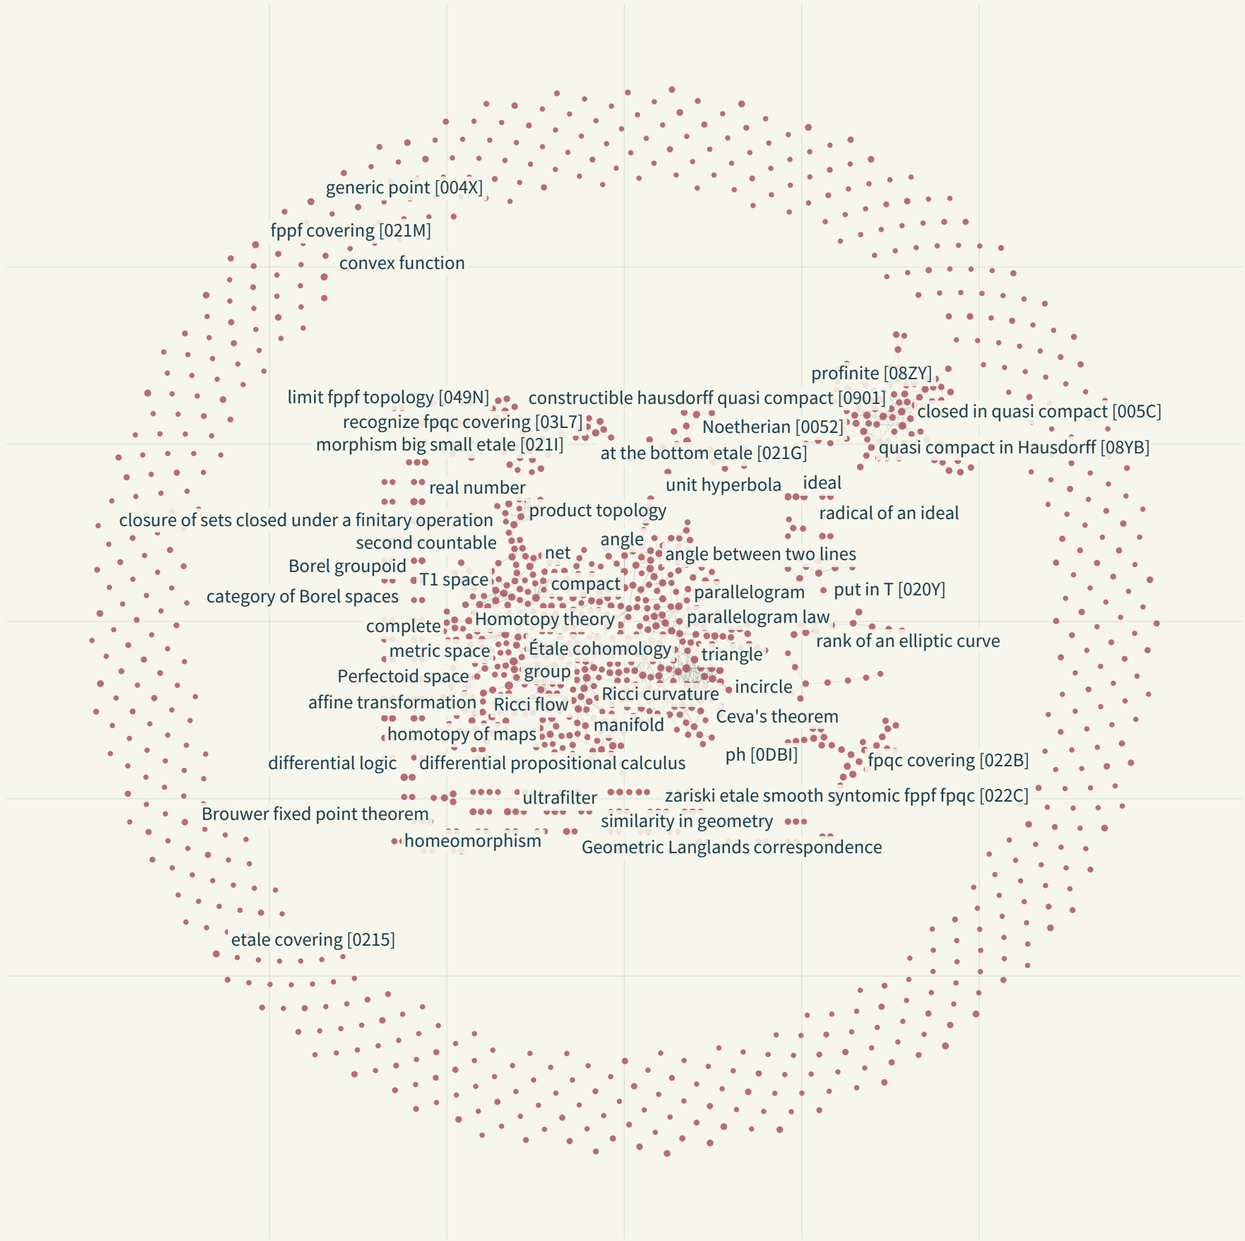

- subgroup
- complex
- category
- quotient group
- Vertex operator algebra
- ring
- Monstrous moonshine
- general associativity
- divisibility in rings
- equation
- relation
- categorical sequence
- group homomorphism
- linear transformation

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Geometry & topology

Mathematical Archipelago · Region detail / 1,551 entries

Highly connected entries

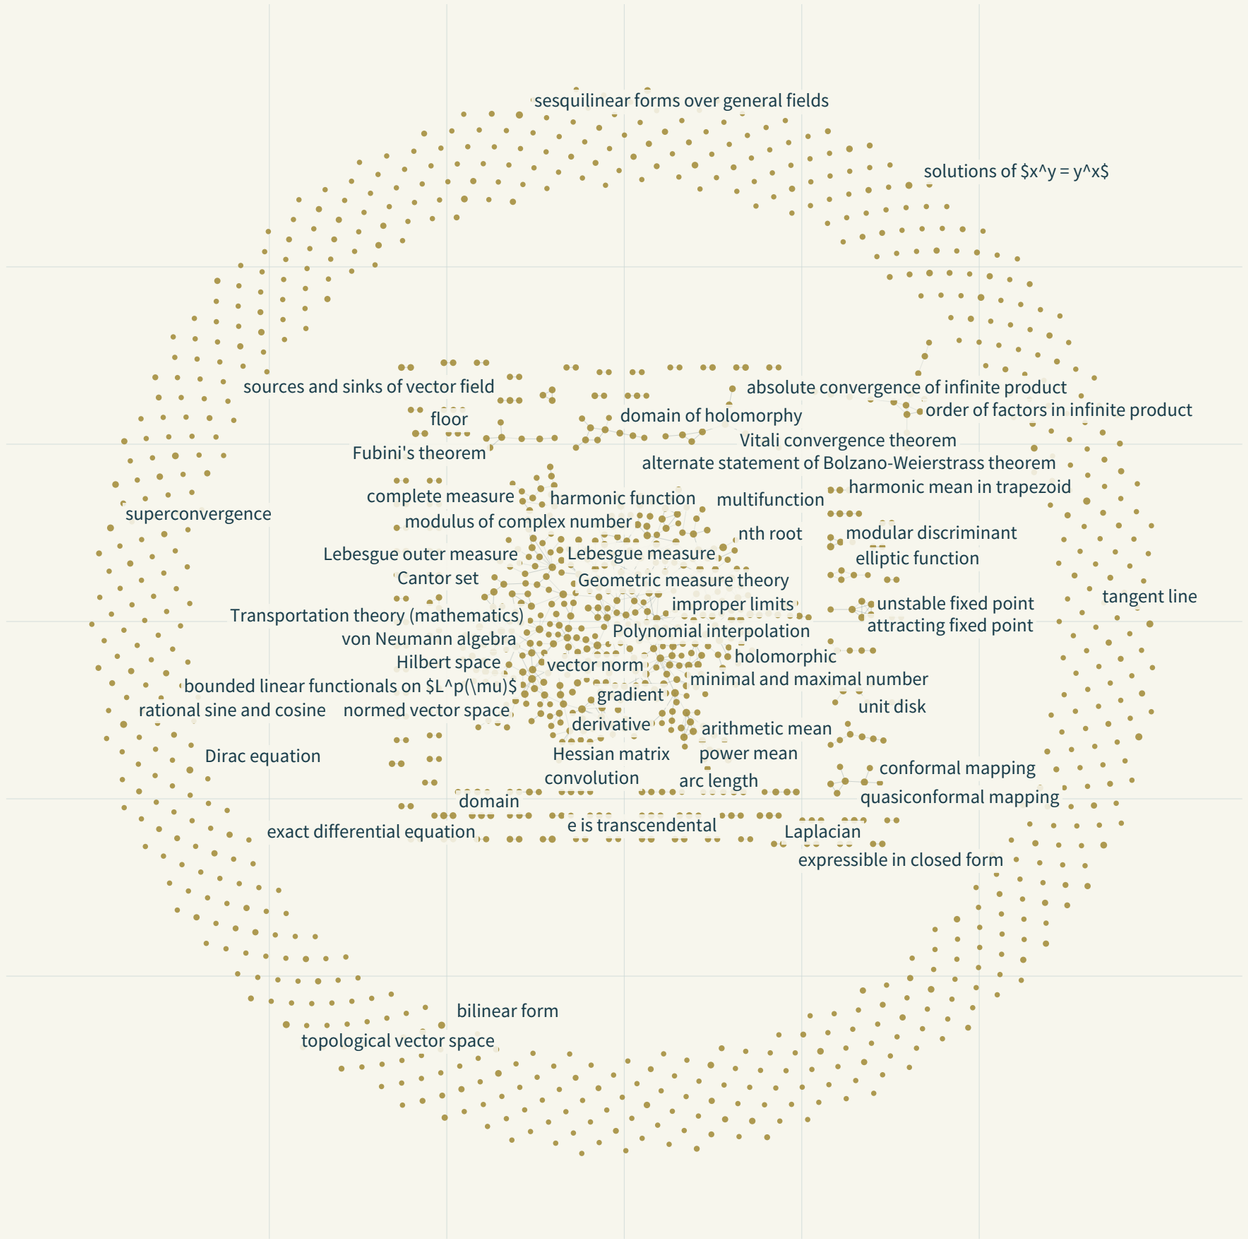

- group
- triangle
- Étale cohomology
- Homotopy theory
- Noetherian [0052]
- Topological quantum field theory
- Ricci curvature
- compact
- Floer homology
- metric space
- closed in quasi compact [005C]
- Ceva's theorem
- regular polygon
- incenter

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Analysis & differential equations

Mathematical Archipelago · Region detail / 1,420 entries

Highly connected entries

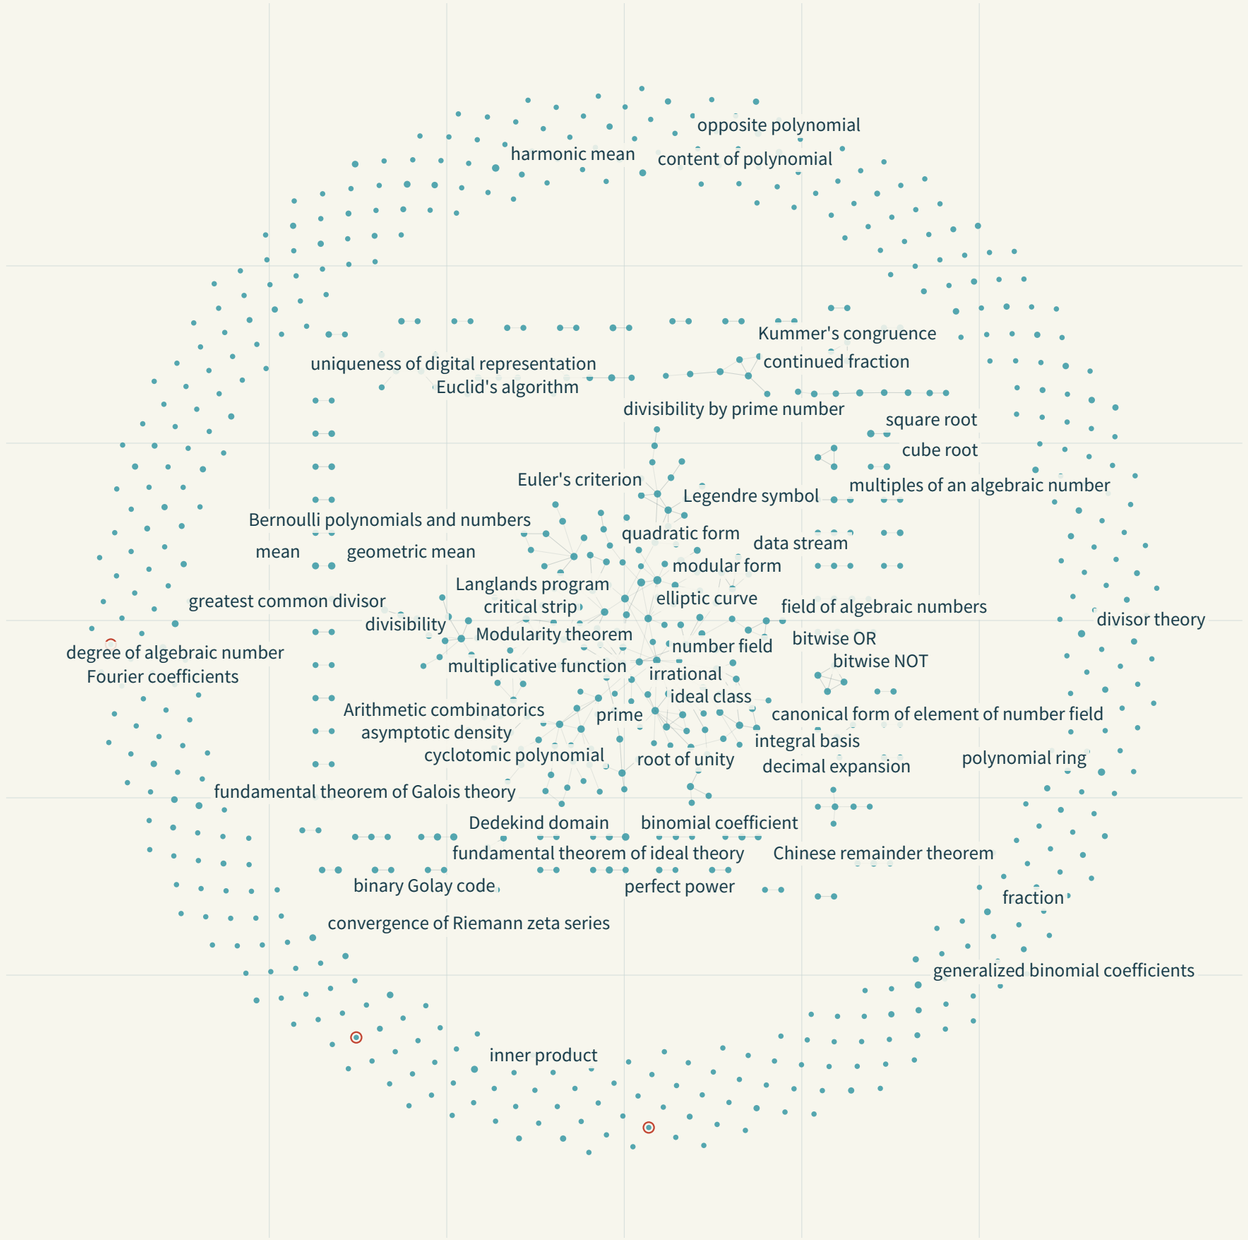

- vector norm
- Polynomial interpolation
- minimal and maximal number
- Transportation theory (mathematics)
- gradient
- arithmetic mean
- Geometric measure theory
- Hilbert space
- complex sine and cosine
- inner product space
- nth root
- bounded linear functionals on $L^p(\mu)$
- Lebesgue measure
- normed vector space

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Number theory & arithmetic

Mathematical Archipelago · Region detail / 825 entries

Highly connected entries

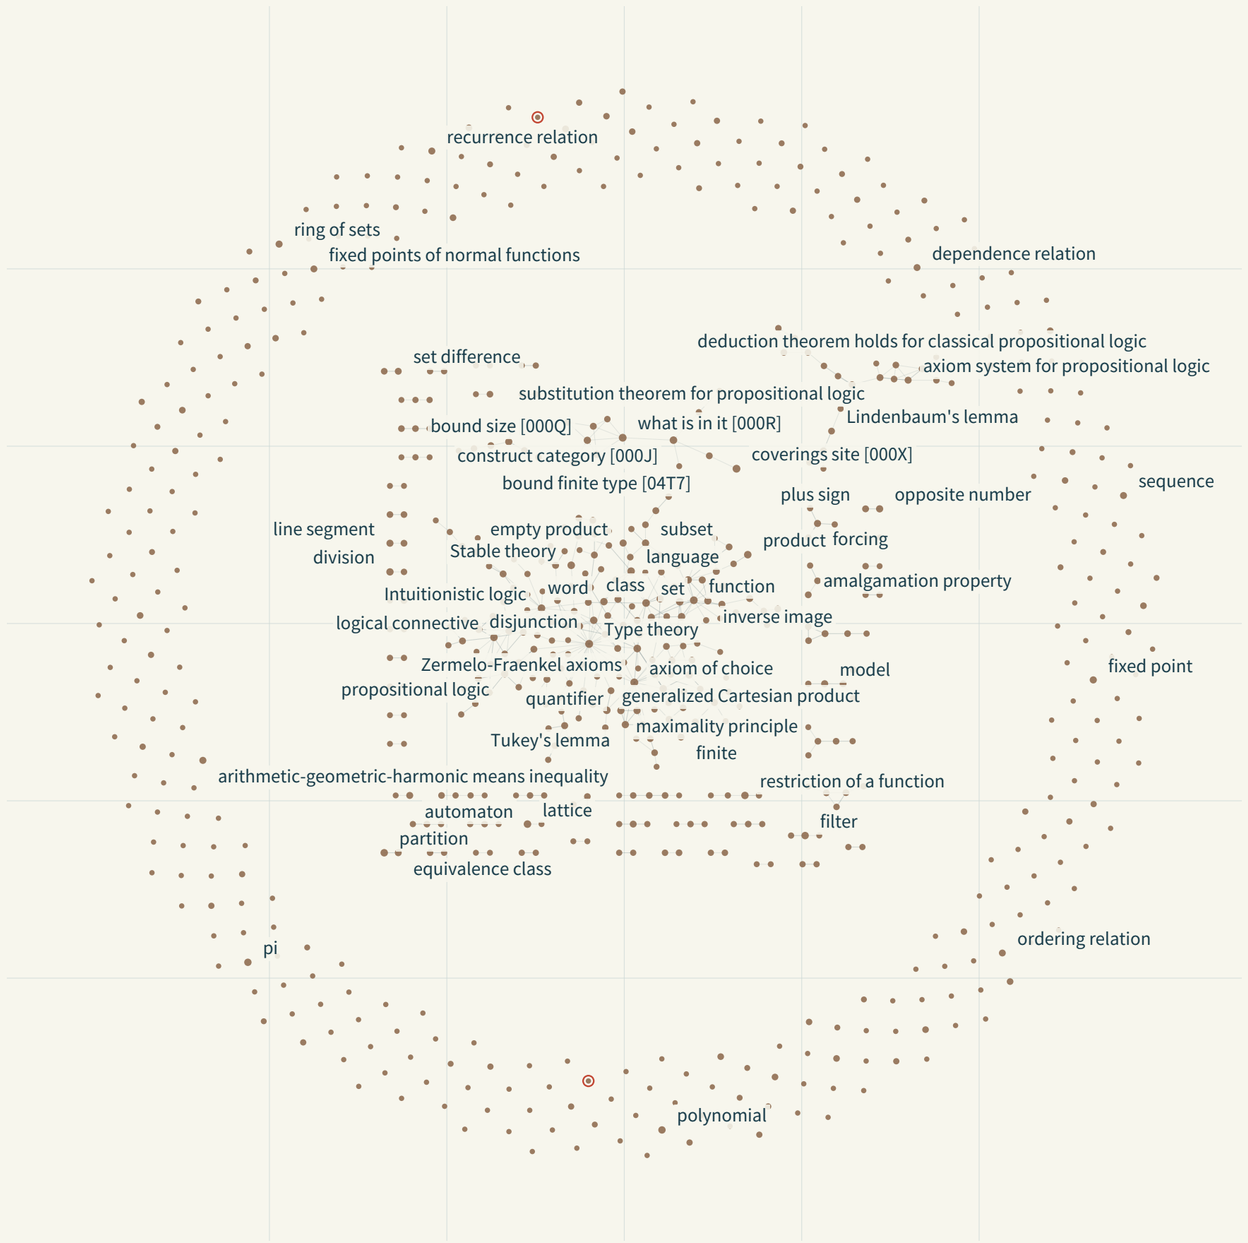

- modular form
- elliptic curve
- Langlands program
- number field
- Modularity theorem
- binomial coefficient
- divisibility
- ideal class
- Riemann zeta function
- Beatty's theorem
- harmonic mean
- integral basis
- irrational
- multiplicative function

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Logic & foundations

Mathematical Archipelago · Region detail / 707 entries

Highly connected entries

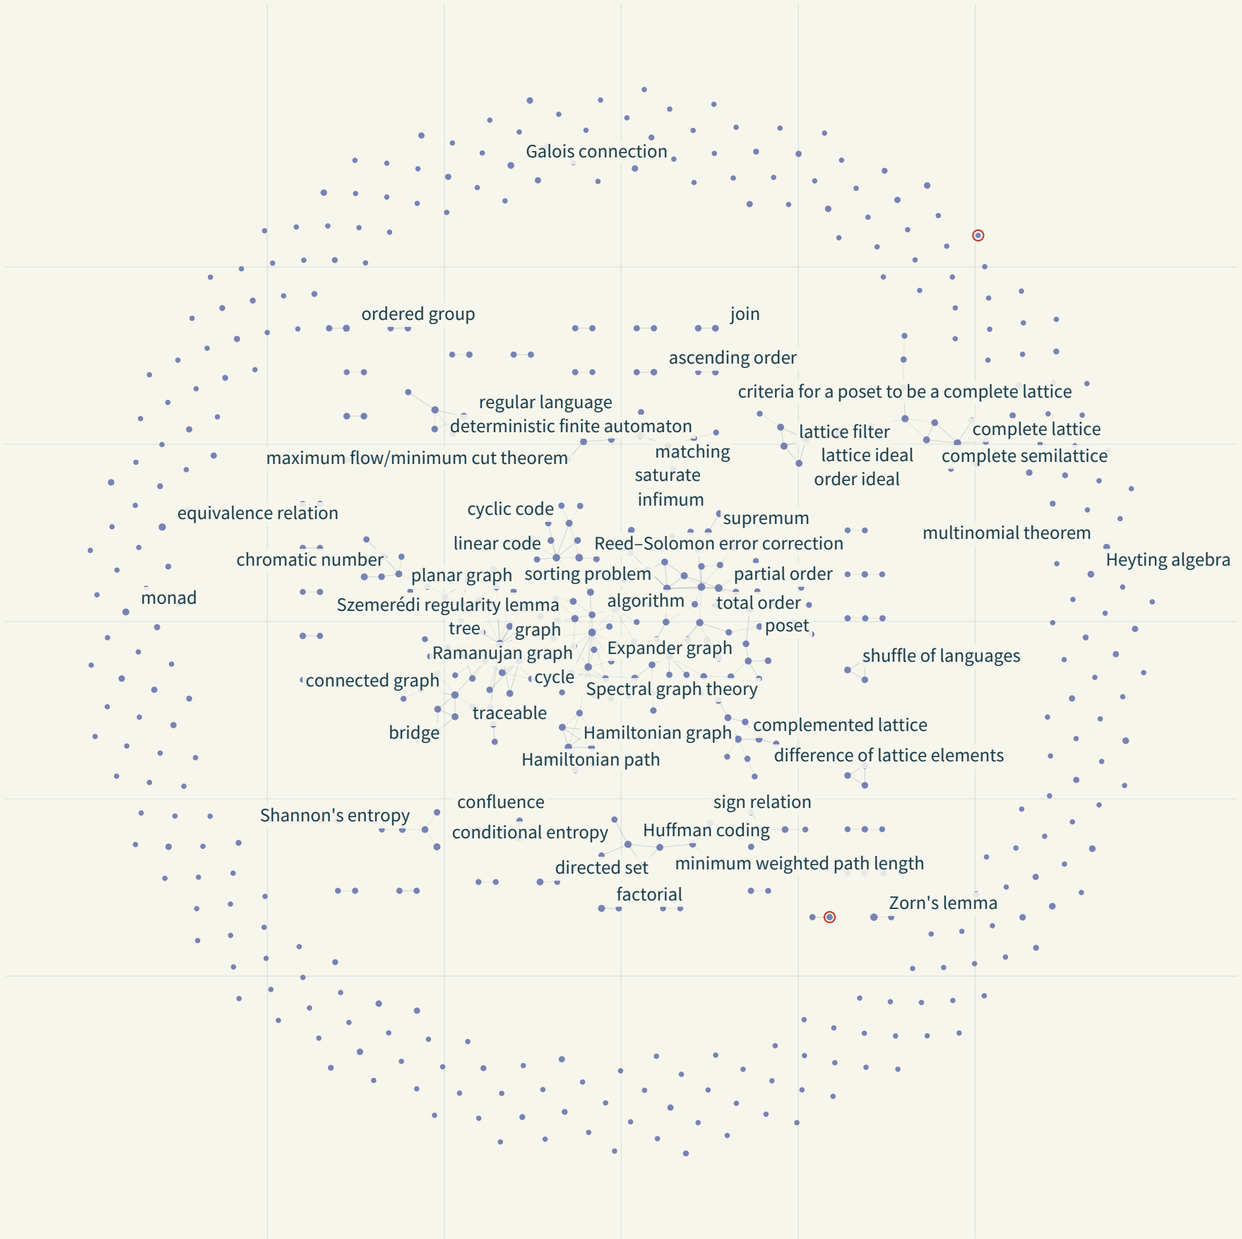

- Type theory
- axiom of choice
- coverings site [000X]
- what is in it [000R]
- function
- set
- language
- Zermelo-Fraenkel axioms
- Intuitionistic logic
- Stable theory
- bijection
- generalized Cartesian product
- lattice
- construct category [000J]

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Discrete mathematics & computation

Mathematical Archipelago · Region detail / 587 entries

Highly connected entries

graph

partial order

total order

Expander graph

Reed–Solomon error correction

sorting problem

poset

Randomized algorithm

Spectral graph theory

Ramanujan graph

linear code

regular language

Zorn's lemma

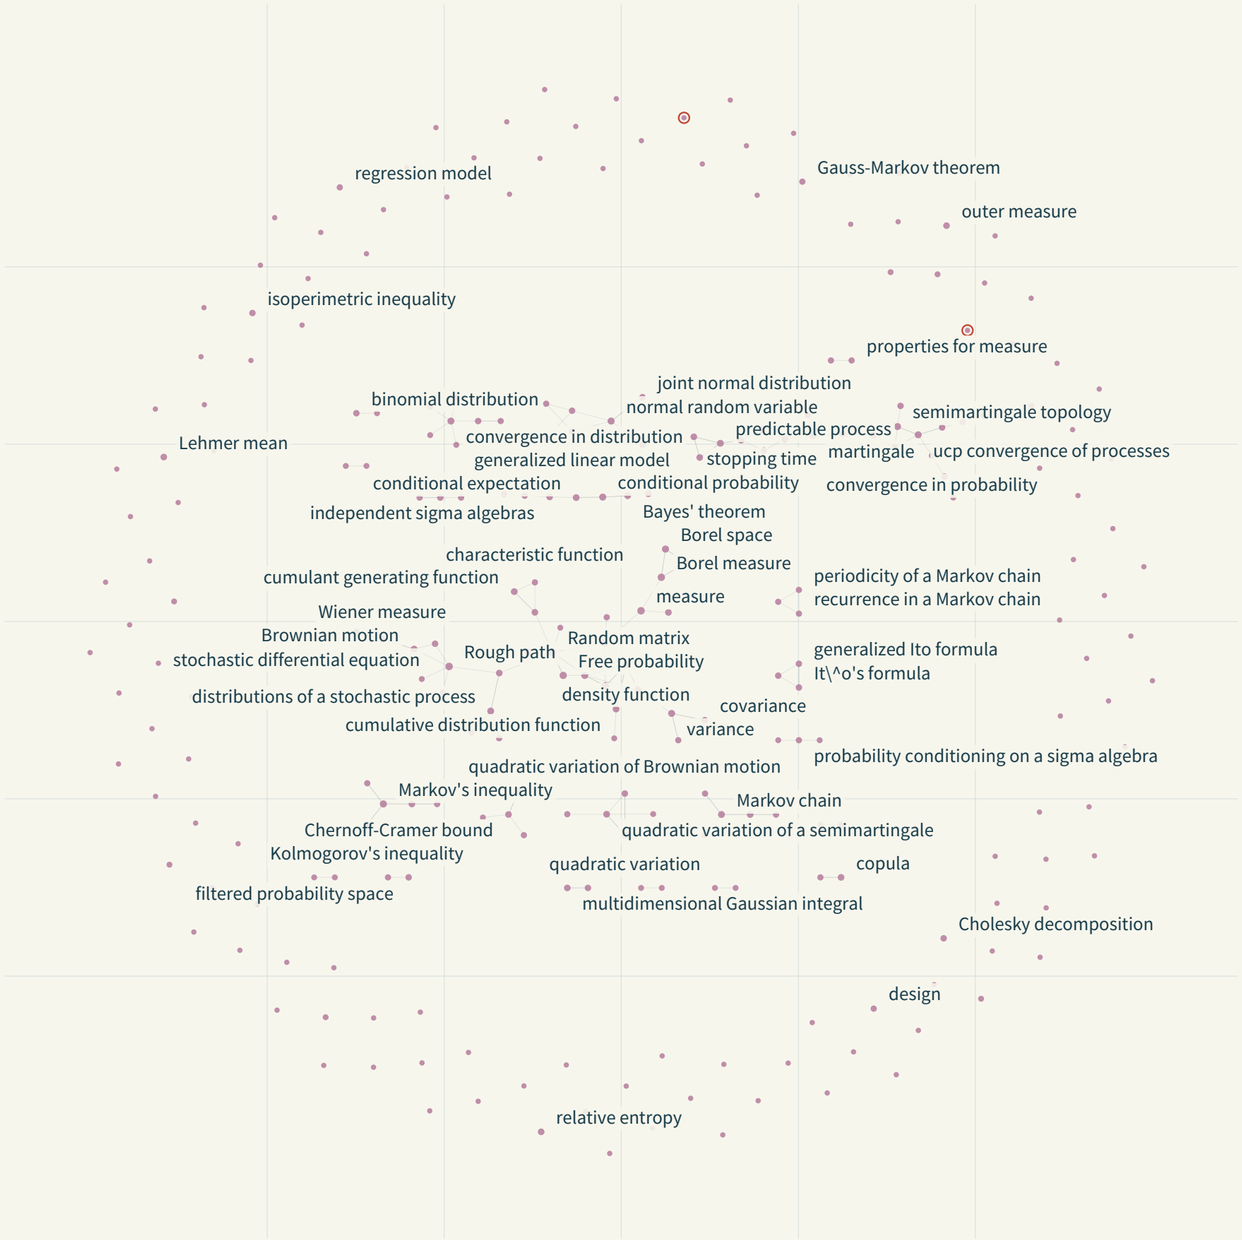

connected graph

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Probability & statistics

Mathematical Archipelago · Region detail / 259 entries

Highly connected entries

- Random matrix
- measure
- Rough path
- Borel measure
- Free probability
- Borel space
- density function
- distribution function
- Markov's inequality
- conditional probability
- normal random variable
- Borel morphism
- convergence in distribution
- probability distribution function

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Mathematical physics & applications

Mathematical Archipelago · Region detail / 66 entries

Highly connected entries

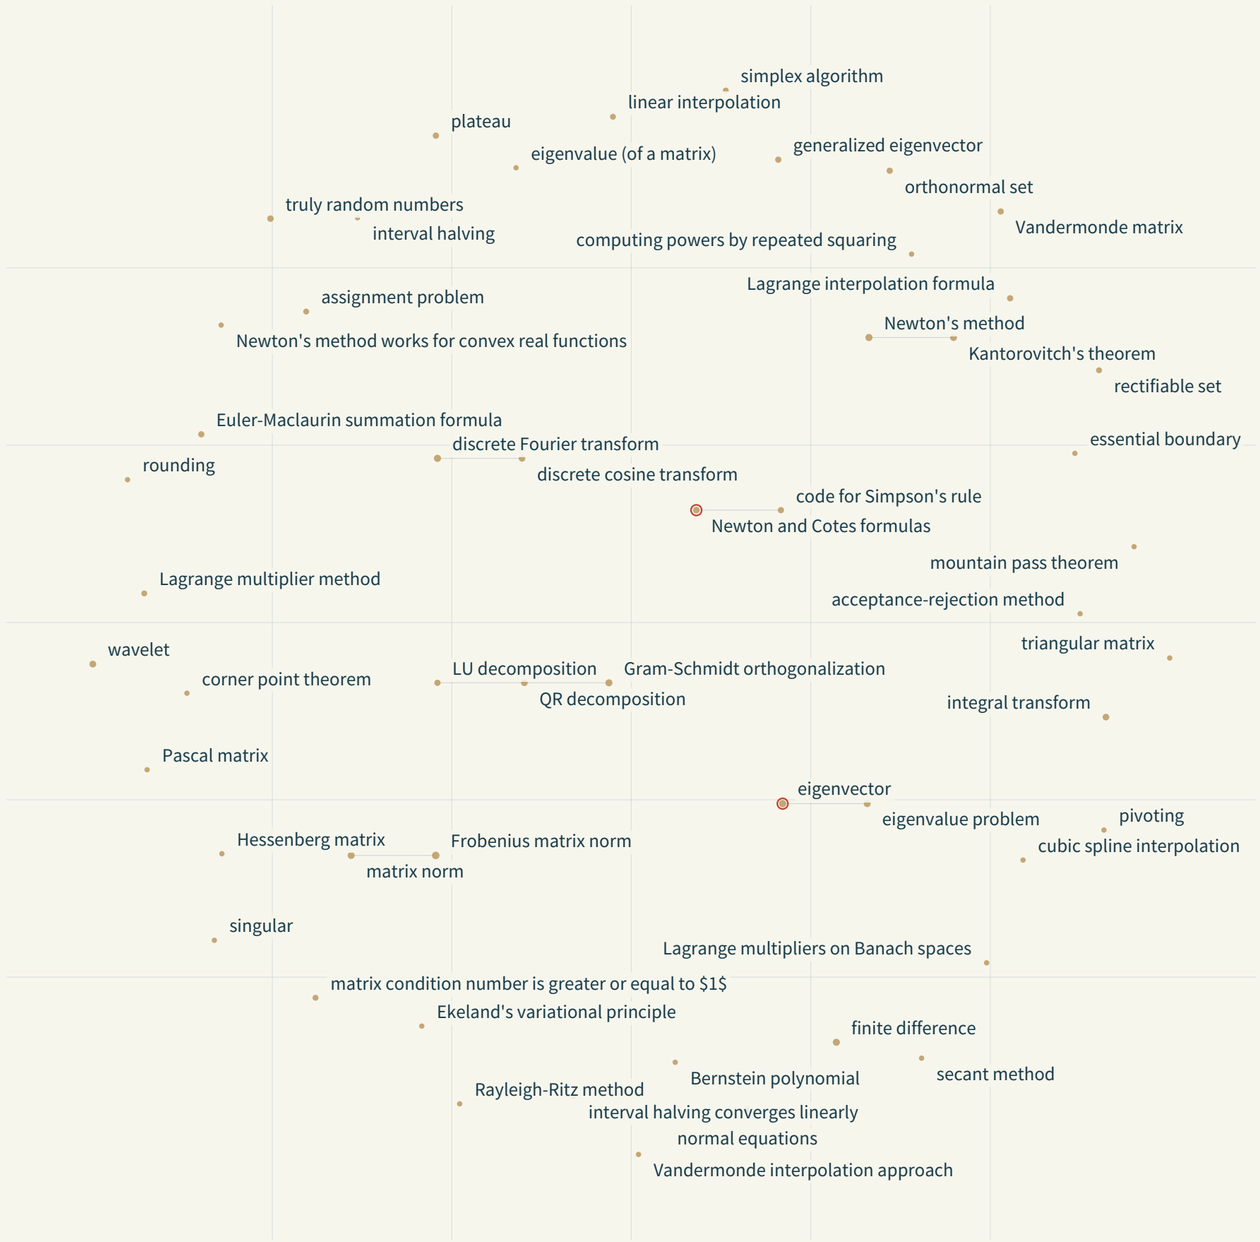

- dot product
- game
- Lie superalgebra
- compact quantum group
- formal grammar
- monoidal category
- approximation theorem for an arbitrary space
- canonical quantization
- first order operators in Riemannian geometry
- locally compact quantum group
- Mercator projection
- output controllability
- path integral
- C^*-algebra homomorphisms are continuous

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.

Numerical methods & optimization

Mathematical Archipelago · Region detail / 52 entries

Highly connected entries

- Frobenius matrix norm
- eigenvector
- discrete Fourier transform
- Newton's method
- finite difference
- Gram-Schmidt orthogonalization
- matrix norm
- eigenvalue problem
- Kantorovitch's theorem
- wavelet
- discrete cosine transform
- integral transform
- Newton and Cotes formulas
- QR decomposition

Every node in this region is retained. Gray lines show selected relations within the region.

Click labels for sources. Cross-region relations remain in the full edge table. Degree is not value; position is not mathematical distance.
