Mathematical Archipelago

A SOURCED NAVIGATION MAP OF MATHEMATICS

21,741

sourced entries · 46,812 recorded relations

REGION INDEX

Colors identify subject groups in the data.

Algebraic geometry	9,693
Commutative algebra	2,530
Categories & homology	2,292
Algebra & structures	1,759
Geometry & topology	1,551
Analysis & differential equations	1,420
Number theory & arithmetic	825
Logic & foundations	707
Discrete mathematics & computation	587
Probability & statistics	259
Mathematical physics & applications	66
Numerical methods & optimization	52

HOW TO READ THE MAP

Each point is one mathematical entry ID.

All nodes remain; only some labels appear.

Point size reflects graph degree,

not mathematical value, difficulty or truth.

Thin lines are recorded data relations,

not automatically proof dependencies.

Positions support indexing and navigation;

2D distance is not mathematical distance.

Outer rings: no recorded in-region links.

This does not establish mathematical isolation.

Red rings: registered source-quality issues.

Known connections offer routes. New connections require definitions, assumptions and proofs.

All 21,741 nodes and 16,000 selected routes are shown. Full relations are in the data tables; detail maps and the index locate individual entries.
